

Amendments to the Specification:

Page 3, lines 18-23:

A system and method in accordance with the present invention comprises a standard integrated module (SIM) for integrating equipment and instrumentation systems onto a process tool's Equipment Front End Module (EFEM) through a standard ~~(BOLTS)~~ interface such as a box open-loaded tool standard (BOLTS) interface. The SIM comprises a kinematic docking frame, quick access panels for easy integration and servicing; space for mounting equipment, and flexible support for integrating a wide range of measurement and other equipment.
